REISSUE APPLICATION DECLARATION BY THE INVENTOR

Deckel Number (Optional)
TRM DV2412 REISSUE

As a below named inventor, I hereby declare that:
My residence, mailing address and citizenship are stated below next to my name.
I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is described and claimed in patent number 5,863,064, granted January 26, 1999, and for which a reissue patent is sought on the invention entitled Skin For Automotive Air Bag Cover Panel Formed by Casting Different Plastic Materials the specification of which

- ☒ is attached hereto.
☐ was filed on _____ as reissue application number _____ and was amended on _____ (If applicable)

I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.
I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.
I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

- ☐ by reason of a defective specification or drawing.
☒ by reason of the patentee claiming more or less than he had the right to claim in the patent.
☐ by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening.

The specification makes clear that the first plastic material (as recited in claim 1) may have a glass transition temperature in the range of -50 to -55 degrees C. Cel. 6, l. 38-41. The specification also makes clear that the second plastic material (as recited in claim 1) may have a low glass transition temperature, i.e., from -60 to -70 degrees C. Accordingly, independent claims 52 and 88 herein more broadly recite that the second plastic material has a glass transition temperature lower than a glass transition temperature of the first plastic material. Dependent claims 53-87 and 89-106 find full support in the application and claims as originally filed.
